

# WORKFORCE OBSERVATIONS

## FOR NORTH CENTRAL WISCONSIN COUNTIES

### October 2004

#### Minor deviations from seasonal norms

In September, **Adams County's** unemployment rate fell more gradually than usual. This left the rate 1.9 percent above its typical September level, which is a sharp contrast from the beginning of 2004, when rates were well below typical. Total nonfarm employment estimates have generally hugged year-ago levels over the last 12 months. Since June, Leisure & hospitality employment estimates have failed to meet year-ago levels by wider margins.

Since April, **Forest County's** unemployment rates have been below typical, an oddly sharp change from the previous trend. Total nonfarm employment estimates are as far below year-ago levels as they have been at any point in the last 12 months. Leisure & hospitality employment estimates were only slightly below year-ago levels during the summer months, but September's estimate was further below the year-ago trend than any leisure & hospitality estimate has been since last December.

In **Langlade County**, the unemployment rate dropped faster than it usually would in September, bringing it closer to the typical level than it has been in the last 12 months. Total employment estimates have swung from slightly below year-ago levels to slightly above, and back again, so the current estimate (slightly above) is only mildly encouraging. The leisure & hospitality employment estimate fell faster this September than last, but remains above year-ago levels.

**Lincoln County's** unemployment rate fell faster than usual in September, leaving it slightly below the typical September level. In August and September, total employment estimates were as far below year-ago levels as they have been in the last 12 months. Construction and manufacturing employment estimates slid further below year-ago levels than they have been in the last 12 months.

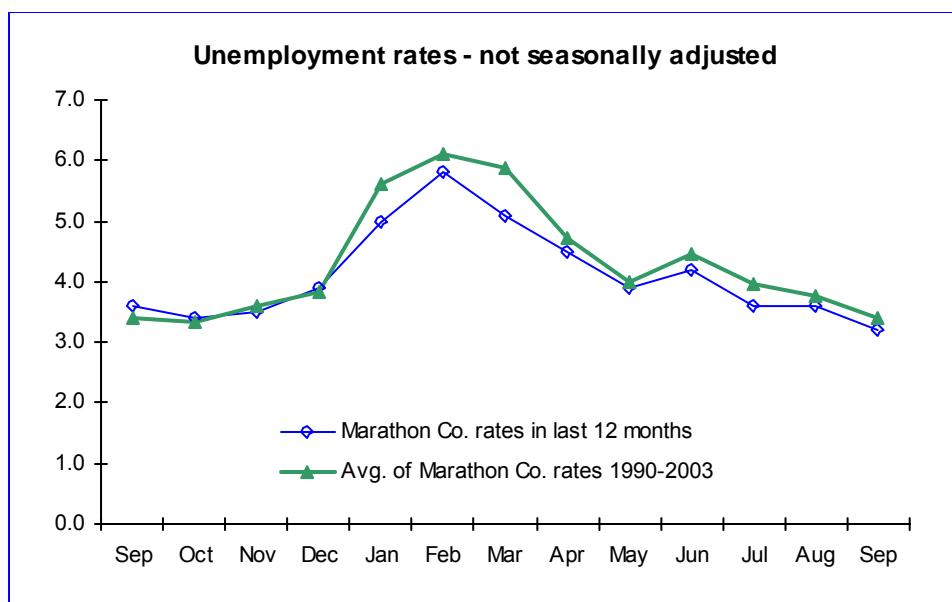

tember than last, the leisure & hospitality employment estimate remains above year-ago levels, but less so than in any month since February.

In **Portage County**, the unemployment rate fell nearly as fast as it usually does, leaving the September level almost as close to typical as the August level had been. Leisure & hospitality employment estimates remain

above year-ago levels, but by roughly half the margin they had been in May and June. Manufacturing employment estimates remain below year-ago levels. Until July, the gap between current estimates and year-ago estimates appeared to be narrowing, but the gap grew in August and September.

In stead of rising as it typically does in September, **Vilas County's** unemployment rate fell slightly. At 0.7 percent above the typical September level, this rate is about as close as has gotten to normal in the last twelve months (except April). Leisure & hospitality remains below year-ago levels and the gap expanded in September.

The unemployment rate in **Wood County** fell more slowly than usual and sits a bit further above typical than in August, but only three months out of the last 12 saw more encouraging rates. Manufacturing employment estimates are closer to year-ago levels than they have been for much of the last 12 months, but the gap between current estimates and year-ago estimates remains considerable.

In **Marathon County**, the unemployment rate remains 0.2 percent below typical levels, which is roughly consistent with the trend since April. Leisure & hospitality employment estimates remain above year-ago levels, but declined faster this September than last, leaving them closer to year-ago levels than they have been since April. The manufacturing employment estimate fell in sync with year-ago declines, remaining above year-ago levels.

Instead of the usual September drop, **Oneida County's** unemployment rate saw a September increase. At 0.9 percent above the typical September level, the rate is roughly consistent with several of the last 12 months. Falling more sharply this Sep-

## Employment by industry estimates - not seasonally adjusted
